DAC Requisition

DAC Intern \ Application Developer Requisition #1000

Your Role:  
As part of the Research and Development team working with a group of product managers, and engineers you will be responsible for the implementation and testing of specific software modules. You will be part of an enthusiastic team driving the creation of applications. Some of these applications will also be used to automate hardware design verification and manufacturing testing.

Your Tasks:  
- Work in a development team on the technical design and implementation of C++ and Objective C software modules.
- Work in a development team on the technical design and implementation of Labview and other test automation modules.
- Develop IOS and Android Applications.
- Develop the software requirements in close cooperation with Product Management and Product Design.
- Provide support for further development of the software architecture.
- Test and debug components.
- Work closely with the Quality Assurance.

Your Profile:  
- Actively pursuing a degree in computer science, engineering, physics or similar subjects, with an emphasis on programming is required.
- Proficient in C++ with some experience in Objective C.
- Experience in planning and estimating software projects is a plus.
- Ability to react swiftly to changing requirements and develop/explore alternative solutions.
- Committed, quality-conscious and efficient.
- Communicative, hardworking and a good team player.
